

Project Delivery Report

Prepared by Corescent Technologies · 05 October 2026

What We Promised

#	Feature	Description
1	Landing Website	A full marketing website with Home, Features, Pricing, Industries, About, Blog, Contact and all legal pages.
2	User Accounts & Login	Sign up, log in, forgot password. Six user roles from Super Admin down to Marketing User.
3	WhatsApp Integration	Connect your WhatsApp Business number. Receive and send messages from the platform.
4	Shared Team Inbox	All WhatsApp conversations in one place. Assign chats to team members, add internal notes, use quick replies.
5	CRM – Contact Management	Store all customer details (name, phone, email, company, tags). Track activity history against each contact.
6	Lead Pipeline	Kanban-style board with 7 stages: New Lead → Contacted → Qualified → Proposal Sent → Negotiation → Won → Lost.
7	AI Auto-Reply	AI automatically replies to incoming WhatsApp messages. Agents can also request an AI-suggested reply.
8	AI Lead Scoring	AI scores every lead 0–100 on Budget, Timeline, Authority and Requirement (BANT). Labels: Cold / Warm / Hot / Sales Qualified.
9	Knowledge Base	Upload PDFs, Word docs or website links. AI uses this content to answer customer questions accurately.
10	Campaign Management	Send WhatsApp broadcasts to your contacts. Schedule campaigns, pick a template, track delivery and read rates.
11	Chatbot Builder	Build automated conversation flows visually — no coding needed. Set triggers, conditions and AI blocks.
12	Ticketing System	Raise and track support tickets. Assign to agents, set priority, move through Open → In Progress → Resolved → Closed.
13	Analytics Dashboard	KPI cards and charts showing leads, conversations, campaigns and team performance over 7 / 30 / 90 days.
14	Billing & Subscriptions	Subscription plans with Razorpay payment integration for Indian customers.
15	Super Admin Panel	Platform-level control: manage all client accounts, plans, usage and revenue from one admin dashboard.

#	Feature	Description
16	White Label / Reseller	Custom logo, custom domain, custom email sending address and a full reseller dashboard.

What We Delivered Extra (Beyond the Proposal)

The following features were not part of the original quotation. We built them to make the product more complete for you — at no additional cost.

#	Extra Feature	What It Does
1	Multiple WhatsApp Numbers per Account	Each business can connect more than one WhatsApp number and switch between them — not in the original scope.
2	Reseller Sub-Accounts with Commissions	Resellers can create and manage client accounts, set their own pricing plans and track commissions earned — a full white-label business layer.
3	Onboarding Wizard	New users are walked through a 5-step setup (business profile, connect WhatsApp, invite team, upload knowledge, done) the first time they log in.
4	Contact Segments	Build audience groups using AND/OR rules (e.g. 'source = Facebook AND city = Mumbai'). Use segments to target campaigns precisely.
5	Bulk Contact Actions	Select multiple contacts and tag, block, archive or delete them all at once. With one-click undo.
6	Contact Import & Export	Upload contacts from a CSV or Excel file. Export your full contact list any time.
7	Blacklist	Maintain a list of numbers that should never receive messages. Import in bulk via CSV.
8	Bulk Broadcast Page	Paste a list of phone numbers, pick a template and send — without setting up a full campaign.
9	Campaign Click Tracking	Links inside campaign messages are tracked. See exactly how many people clicked, shown as a click-rate column.
10	Auto FAQ Generation	After uploading a document to the knowledge base, AI automatically drafts 5 question-and-answer pairs from it. Agents can edit before publishing.
11	AI Conversation Summary	One click summarises any conversation — key points and action items — so agents don't have to read the full chat.
12	WhatsApp Embedded Signup	Clients can connect their WhatsApp Business account directly inside the platform (via Meta login) — no manual API setup needed.
13	WhatsApp Number Health Monitor	Shows the quality rating, message tier and usage stats of each connected number, pulled live from Meta.
14	Wallet & Top-Up	Each account has a wallet. Clients top up via Razorpay and the balance is used for message credits.

#	Extra Feature	What It Does
15	Super Admin Impersonation	Super admin can 'view as' any client account — seeing exactly what that client sees — without logging out.
16	Admin WhatsApp Panel	Super admin can see and manage the WhatsApp integrations of any client account from the admin dashboard.
17	Invite Code & Disposable Email Block	Registration requires a valid invite code and blocks known disposable/throwaway email domains automatically.
18	Mobile-Responsive App	Every page of the dashboard works on phones and tablets — sidebar slides, buttons wrap, layout adapts.
